[http://www.wrh.noaa.gov/sto/brief/wwwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

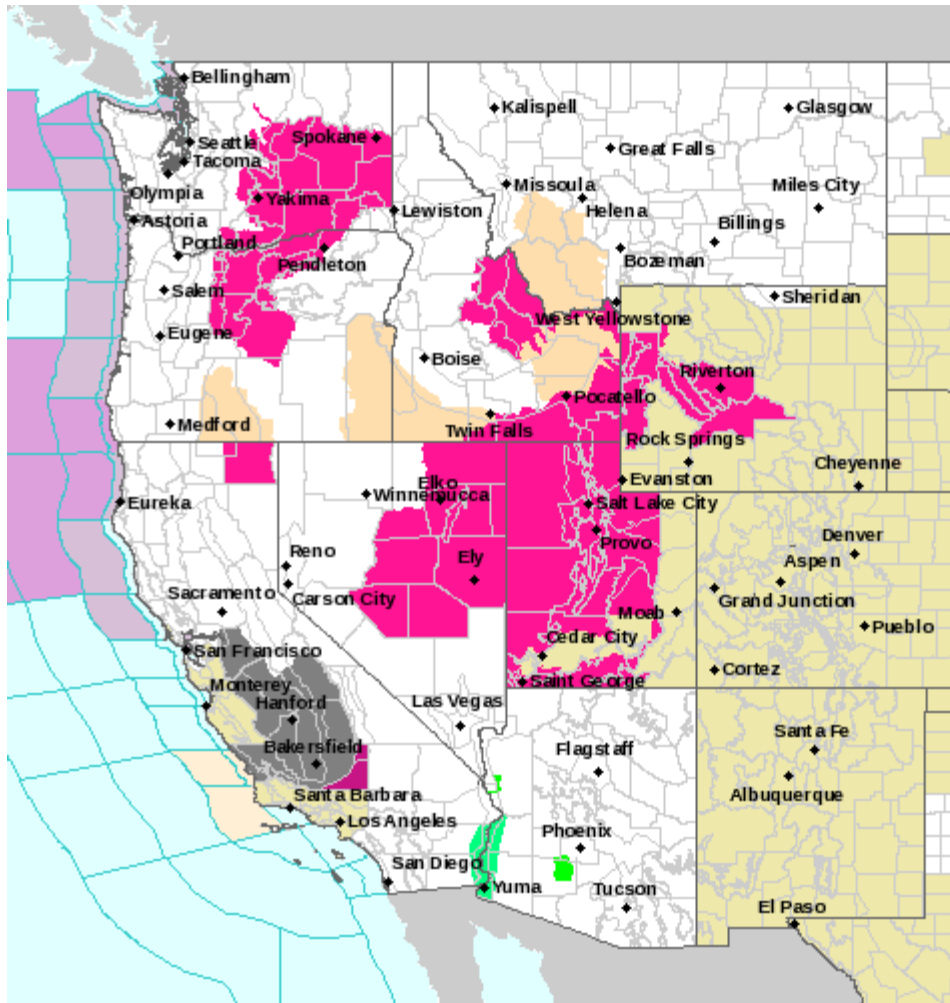

Strong high pressure will continue near the California and Nevada state line to the south of Lake Tahoe. Limited monsoon moisture is in place and mostly dry thunderstorms are expected near the higher terrain of the northern and eastern areas through today. Thunderstorms will only be isolated, but with very dry fuels and light rainfall expected the lightning will likely be very efficient in starting new fires. Outflow winds from any storms could reach 40-50 mph. Thunderstorm chances will continue today. The western portion of the northern mountains will not likely see any thunderstorm activity today. High Risk designations for Significant Fire Potential are in place today for the possible lightning. The high will weaken as a Pacific NW trough deepens and begins to affect the Northern California region this weekend. Any thunderstorms Sunday should remain south and east of Northern California. Temperatures will gradually cool back to normal or just a few degrees above normal beginning Sunday. Overnight RH recovery will improve a little in some areas, but only by a little. The marine layer is likely to deepen somewhat early next week with coastal low cloudiness becoming more persistent during the day, and afternoon sea breeze winds will be stronger and reach farther inland. Gusty afternoon westerly winds with local areas with low RH will probably develop over the far eastern areas by Monday, if not Sunday. These winds will be in areas where new lightning ignitions are possible today, and holdover fires may begin to spread rapidly in these conditions.

## **SOUTHERN CALIFORNIA**

“Monsoonal” moisture will slowly sift into the area over the next couple days as light southeasterly transport winds continue across the area. However, high pressure aloft will serve to keep the atmosphere quite stable over the weekend which will cause the thunderstorms to be confined to the mountains and other higher elevations. Today and Sunday, expect more widespread thunderstorm activity in the Sierras and a handful of storms will be possible in the mountains of Southern California east of I-15. Most of the storms over the weekend should produce rainfall. Temperatures will cool a couple of degrees today and Sunday as high pressure weakens over the area. Early next week, a trough over the Pacific Northwest should remove most of the moisture from Central CA and no thunderstorms are expected in the Sierras after Monday. Scattered wet Thunderstorms will still be possible in Southern California Monday through Wednesday, mainly from Los Angeles County south and eastward. Temperatures will be 5-10 degrees cooler across the entire district by Tuesday as onshore flow redevelops across the area.
